Art Unit: 1651

DETAILED ACTION

The amendment filed 1/18/05 is acknowledged. Claims 11-16 and 18-20 are being considered on the merits.

Claims 21-32 are withdrawn from consideration as directed to a non elected invention.

This application contains claim 21-32 drawn to an invention nonelected with traverse on 5/13/04. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112: The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 11-16 and 18-20 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Insertion of the limitation "alkyl oligoglycoside" in the context of microemulsions having 1 to 100 nm does not have support in the as-filed specification. The insertion of this limitation is a new concept because it neither has literal support in the as-filed specification by way of generic disclosure, nor are there specific examples of the newly limited genus which would show possession of the concept of the use of "alkyl oligoglycoside" in the context of microemulsions having 1 to 100 nm as now claimed. There is only one exemplified, albeit unidentified, "alkyl glycoside" (not alkyl oligoglycoside) at page 14 and the cancelled claim 17 pertained to a composition wherein "emulsifier comprises an alkyl oligoglycoside. The original claims do not appear to be directed to this material.

This is not sufficient support for the new genus "alkyl oligoglycoside" in the context of microemulsions having 1 to 100 nm. This is a matter of written description, not a question of what one of skill in the art would or would not have known. The material within the four corners of the as-filed specification must lead to the generic concept. If it does not, the material is new

Art Unit: 1651

matter. Declarations and new references cannot demonstrate possession of a concept after the fact. Thus, the insertion of "alkyl oligoglycoside" in the context of microemulsions having 1 to 100 nm is considered to be the insertion of new matter for the above reasons.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 11-16 and 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tellier *et al.*.(U.S. Patent No. 4,401,762) taken with Brenkman *et al.*.(U.S. Patent No. 5,674,830) for the reasons as stated in the last Office action and the further reasons below.

The claims are directed to a reaction medium comprising a microorganism and a microemulsion, wherein the microemulsion comprises water and alkyl oligoglycoside and an oil phase. The oil phase may be a fatty acid alkyl ester or a vegetable triglyceride.

Response to Arguments

Applicant's arguments have been fully considered but they are not deemed to be persuasive.

Applicant argues that Brehnkman does not suggest the inclusion of microorganisms or the use of alkylglycoside containing microemulsions for the fermentation of microorganisms, alleging that there is insufficient motivation to combine the references.

To begin with, the claims are not directed to a method using alkylglycoside containing microemulsions for the fermentation of microorganisms, but rather to a reaction medium.

In response to the argument that Brenkman does not suggest the inclusion of microorganisms, it is noted that, "[n]on-obviousness cannot be established by attacking references individually where the rejection is based upon the teachings of a combination of references." In re Merck & Co. Inc, 800 F.2d 1091, 1097, 231 USPQ 375, 380 (Fed. Cir. 1986). The test of obviousness is "whether the teachings of the prior art, taken as a whole, would have

Art Unit: 1651

made obvious the claimed invention." In re Gorman, 933 F.2d 982, 986, 18 USPQ2d 1885, 1888 (Fed. Cir. 1991).

In addition, motivation can come not only from direct teaching of the prior art, but also the nature of the problem to be solved and/or the knowledge of persons of ordinary skill in the art, Ruiz v. A.B. Chance Co. 357 F.3d 1270, 69 USPQ2d 1686 (2004). The cited references are in the same field of endeavor and seek to solve the same problems as the instant application and claims, and one of skill in the art is free to select components available in the prior art, *In re* Winslow, 151 USPQ 48 (CCPA, 1966). Further, the examiner recognizes that references cannot be arbitrarily combined that there must be some reason why one skilled in the art would be motivated to make the proposed combination of primary and secondary references, *In re* Nomiya, 184 USPQ 607 (CCPA 1975). However, there is no requirement that a motivation to make the modification be expressly articulated. One test for combining references is what the combination of dislosures taken as a whole would suggest to one versed in the art, rather than by their specific disclosures, *In re* Bozek, 163 USPQ 545 (CCPA 1969). In this case, the use of akyl oligoglycoside components as emulsifiers is known in the art, and used for their known art specific properties, in different combination, i.e. with a microorganism in the composition, is considered to be obvious in the absence of evidence to the contrary.

Therefore the rejection is deemed proper and it is adhered to.

No claim is allowed.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Irene Marx whose telephone number is (571) 272-0919. The examiner can normally be reached on M-F (6:30-3:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Wityshyn can be reached on 571-272-0926. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
